

**【ABSTRACT】**

Disclosed herein is a multi-functional traffic signal stick,  
which has a red signal LED part for providing a signal stick  
function and a white signal LED part for providing a flash  
5 light function, and which a police officer carries on the road.  
The multi-functional traffic signal stick can be carried  
conveniently as a flash light by telescoping each joint of a  
length-adjustable flashing tube manufactured in an antenna  
type into a larger tube, and used as a signal stick, which is  
10 well seen from a far distance, by stretching each joint of the  
length-adjustable flashing tube like an antenna. In addition,  
the present invention can serve to inform danger or accidents  
when being mounted uprightly on the road or a proper place  
such that three supporting rods mounted on a grip part at  
15 regular intervals are unfolded to support the signal stick.
